## Denmark

### LAGI Green Cities Partners

Green Cities is a close and binding partnership between the Danish municipalities of Albertslund, Allersø, Ballerup, Herning, Kolding and Copenhagen.

A Green Cities municipality does its utmost to maintain, protect and improve the environment and works towards creating a sustainable local community in the long term.

The Green Cities Partnership is built on six common themes and a series of exacting goals, towards the achievement of which member municipalities are obliged to work. The Green Cities Partnership is based on a partnership agreement, which was approved in 2012.

The six common themes are: Climate, Groundwater, Organic Food, Natural Environment, Traffic, and Waste.

Green Cities are excited to see the creative and innovative ideas being generated through LAGI, and we hope that they can inspire us in our daily work for a sustainable society.

Read more about the common themes and goals on the Green Cities website.

## LAGI Green Cities Partners

LAGI invites teams to learn more about the Green Cities municipalities in Denmark.

The four municipalities of Albertslund, Allerød, Herning, and Kolding have all expressed interest in pursuing construction by working with LAGI & LAGI participants.

Although outside of the context of the competition—and not related to the LAGI 2014 design brief or jury criteria—we invite you to visit the Green Cities section of the LAGI designcomp site, learn more about their initiatives, and possibly even use their content as inspiration for designs that are in addition to your submission for LAGI 2014.

If you are interested in presenting your land art generator ideas to the attention of our Green Cities partners, please send us an email to:

[greenities@landartgenerator.org](mailto:greenities@landartgenerator.org)

by May 31, 2014

Perhaps you have ideas about how your LAGI 2014 design submission for Refshaleøen could in some way be of interest to one of these municipalities.

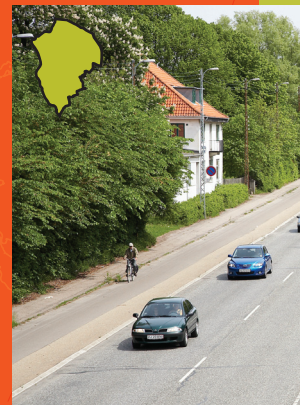

In June 2014 we will be providing Green Cities partners with information and images that we receive by way of this dedicated email address.

### Albertslund

Roskildevej is a road that cuts through the city of Albertslund and is one of the old main roads to Copenhagen. Currently it appears as a noisy massive barrier between the north and south of Albertslund.

Although the city of Albertslund is known for its climate and environmental policies and initiatives, Roskildevej does not yet reflect this commitment in its design.

The city of Albertslund is working to create better connections across Roskildevej in order to tie the city together.

### Allerød

The site in Allerød is an integrated part of an area which has been shaped by 100 years of gravel quarrying and landfill. Today these activities have ceased and the company in charge of the landfill activities leaves the area during 2014. The gravel quarrying and landfill activities have transformed the area and today it contains three minor lakes and two minor hills. Future plans for Lyngre Gravel Pit include developing the area into a hot spot for recreational activity in the municipality. The western part of the pit has already been restored as a recreation site with paths for walking and running, and with a wooden bridge alongside the small lakes.

### Herning

The “TimeLine” is a project to develop the closed Vejlevej road and use it for new purposes. The old road of approximately one and a half kilometres runs through the Knudsmosen (the Canute’s bog) and will be in the future a unique setting for movement, art, and nature. At the same time it will strengthen the connection between the Herning City Centre, Lind, and the Herning Exhibition Centre.

The vision is that “TimeLine” will offer a wide array of experiences to a large number of users and contribute to creating life and activity in the area all year round.

### Kolding

Kolding has an overall vision called “Kolding—we design for life.” Along with the vision, Kolding also stands for ambitious goals regarding environmental management and CO<sub>2</sub> reductions. The site in Kolding is called “Design City Kolding” and is based on three principles:

First, it is going to be a modern and vibrant neighborhood.

Secondly, “Design City Kolding” will become a meeting point between the town of Kolding, the landscape, and the fjord—connecting them.

Finally, sustainability and design are integral elements of the concept of “Design City Kolding.”

### LAGI 2014 Team

**ROBERT FERRY**  
LAGI Founding Co-Director

**ELIZABETH MONOIAN**  
LAGI Founding Co-Director

**LEA SCHICK**  
LAGI 2014 Project Manager

**GRY KROGAGER LUND**  
LAGI Project Manager

**ANNE SOPHIE WITZKE**  
LAGI 2014 Curator

**TRINE PLAMBECH**  
LAGI 2014 Innovation Specialist

**IDA EGEDAL HENRIKSSON**  
LAGI 2014 Assistant

### LAGI 2014 Ambassador

**IDA AUKEN**  
Danish Minister of Environment
