# MAASAI SOLAR

## FOR RURAL, URBAN, AND OUTDOOR USE.

The Maasai Solar Module is a unique work of art that charges during the day and provides light and power to laptops, phones, and other personal electronic devices.

Maasai Solar Modules are co-designed by the Land Art Generator Initiative, Olorgesalie Maasai Women Artisans (OMWA), and Idia'Dega, and handcrafted by OMWA with traditional Maasai beadwork. **Each is a unique piece of renewable energy artwork.**

Maasai Solar Module lights up a summer night in the city.

**Outdoor Use** The Maasai Solar Module can be used to provide light and power for porch lighting, picnics, camping, and any other use. The module becomes fully charged after four hours in the sun or can be plugged into a wall outlet before travel. A fully charged module can provide hours of laptop use, fill up 2-3 cellphones, and provide light throughout the night.

**Use in Kenya** The Maasai community in Olorgesalie use the rings to affix the modules to the community shade structures during the day, and to hang the pendant light from the ceiling of their banda in the evening while charging their electronic devices.

## Maasai Solar Module

width: 15" (76.2 cm)

Height: 30" (38.1 cm)

Solar side

Luminary side

**Urban Use** The leather binding allows the module to be opened up to drape over a railing or window sill for charging during the day (urban use). The rings serve to connect the module to ceiling chains in the evening to cast a bright, warm glow onto dining tables or kitchen islands.

Leather straps are used to secure the module when closed and can also be used to help attach the module to a south-facing balcony railing in the city.

A lithium-ion battery inside has charge indicators and both USB and DC power outputs.

All leather is ethically sourced. Vegan options are also available.
