IT IS WHAT IS TRYING TO AVOID. A HUMAN-INDUCED CLIMATE CHANGE. A DEVICE THAT PRODUCES CLEAN ENERGY AND GENERATES A LOCAL CLIMATE CHANGE AS AN ARTISTIC EXPERIENCE.

946627

**A** Solar energy is partly absorbed and partly reflected by the earth. In addition, some of the energy absorbed by the earth is radiated back into space. The net difference in energy absorbed vs. energy radiated determines whether the earth becomes warmer or cooler over time.

**B** By avoiding CO<sub>2</sub> emissions and converting that effort, in both production and usage, into a double positive impact, we use a hybrid strategy that combines green long term and a local short term compromise.

**C** As a vertical windmill, harness the kinetic energy of the wind to generate 1000kW of clean electricity. Users need to face into the prevailing winds, eliminating the need for a yaw mechanism. The generator head can be placed on the ground.

**D** Part of the energy generated is dedicated to pump sea water to the top, accumulating potential energy. There is no water accumulation, in a continuous process, water falls inside the blades accelerated by the force of gravity.

**E** Series of humidifiers spray fine droplets of sea water about a 10000 of a millimetre in size in the opposite direction of the turning movement, reducing the reaction by Action-Reaction Principle.

**F** When you make saltwater into the air you create mist that condenses around existing bigger and whiter clouds, thus becoming more sunlight BAKING light.

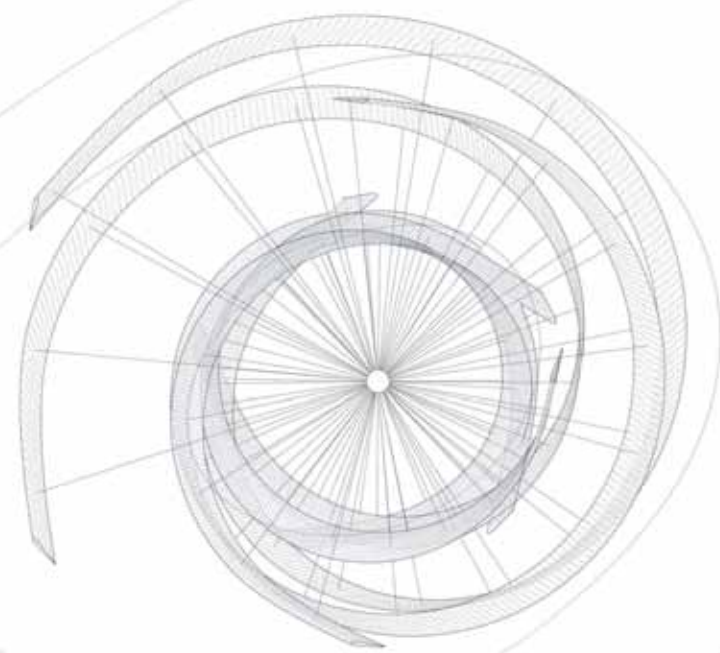

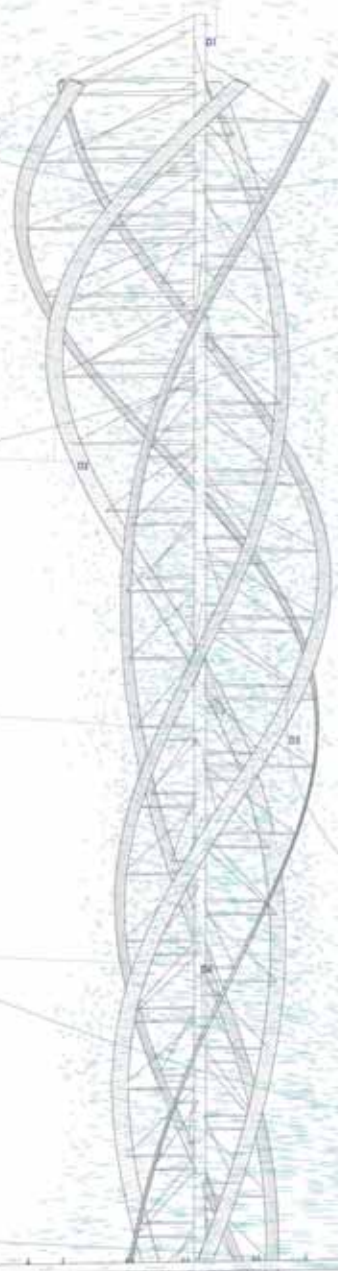

**G** In addition to global temperature stabilisation, the technique is used to rectify more regional problems. The Emirate has hotter and climatic conditions, with hot and dry summers, and mild to warm winters with moderate-to-high rain.

**H** A new type of wave is created. As humidity rises, vegetation can control the soil. Different trees grow in tropical and subtropical areas. With the availability of these forests in several coastal areas in the UAE, they can reduce desertification impacts.

**I** Using the sun energy green plants convert carbon dioxide and water into oxygen through photosynthesis.

IT IS NOT INSPIRED BY NATURE. IS ACTIVATED BY NATURE. AS IT ISN'T AN OBJECT, DOESN'T HAVE USE INSTRUCTIONS. CAN'T CONTROL IT. JUST ENJOY! IT'S PREDICTABLE AS WEATHER. IT'S UNPREDICTABLE AS WEATHER

The tornado contacts the sea water in its low part  
 Through a water pump (01) placed in the base of the  
 tornado, the water rises progressively for the  
 interior of the shaft up to reaching the top level of  
 the tornado(02), where through five structural pads  
 (03) the movement water is realized up to getting  
 in each of the five blades because of a perforation  
 on 4 (04).  
 Once there, the gravity and the rotatory movement  
 of the blades, produce the water dispersion, which it  
 is ejected to the outside through small perforations  
 placed in the ends of the blades that generate it  
 (05) making the effect of a big cloud in movement.

NOBODY KNOWS IT'S SIZE. IT'S AS BIG AS THE EFFECTS THAT PRODUCES. IT'S NOT DANGEROUS. BUT DOESN'T SEEM SAFE. IS SHAPED LIKE A CATASTROPHE. BUT PROVIDES BENEFITS.
